

SolidDrive SD1 Surface Transducer

Sound without Speakers

Solid Drive® is the solution for invisible sound, providing a hidden sound source for in-wall, in-ceiling, surface mount, and glass applications. The patented technology at the heart of SolidDrive® transforms nearly any rigid or semi-rigid surface (wood, sheetrock, glass, metal and more) into a sound source. The powerful SolidDrive directly transfers acoustic energy to the surface it's mounted to, creating a large and dynamic sound field.

With no visible wires or grilles, SolidDrive gives you the freedom to have Sound without Speakers. [LEARN MORE...](#)

The Hunterian Museum, London

Transplant and Life

The Hunterian Museum boasts unrivalled collections of human and non-human anatomical and pathological specimens, models and surgical instruments across the centuries, as well as art and sculpture on the subject of surgery and anatomy. It is open free to all visitors from Tuesday to Saturday, 10AM-5PM.

The Transplant and Life exhibition by Tim Wainwright and John Wynne gives life and voice to patient experiences and aims to raise awareness of the importance of transplantation and some of the challenges surrounding it. [LEARN MORE...](#)

The Mary Rose Museum, Portsmouth

Full Height Viewing Balcony

The Mary Rose Museum has re-opened with a full uninterrupted view, after a £5.4m revamp. Since being raised from the Solent in 1982, the Mary Rose, Henry VIII's flagship has undergone 34 years of conservation and can now be viewed through floor-to ceiling windows and an air-locked viewing balcony at the purpose built museum in Portsmouth Historic Dockyard.

Originally opening doors to visitors in May 2013 the museum has been closed from public view since November 2015... [LEARN MORE...](#)
