

Designing Audio for PAVA systems?

EN54-24
CERTIFIED

PAVA systems are installed where there is a requirement to provide clear concise spoken messages in the event of emergencies to safely evacuate occupants. Loudspeakers in new PAVA installations must comply with British Standard:

BS EN 54-24:2008 Fire detection and fire alarm systems. Components of voice alarm systems – Loudspeakers.

We have indicated below a number of loudspeaker models meeting the EN54-24 standard. If you'd like some assistance with a PAVA system design get in touch today.

In-Ceiling Loudspeakers

SoundTube's CM-EZ-II series provides great sound and great value.

Available in multiple sizes including short-can mounts for tight ceiling spaces.

Developed specifically for the paging and background music applications where cost, quality and fit are paramount, the CM-EZ-II series is ideal for hotels, retail stores, restaurants, airports, churches (under-eaves), medical facilities or boardrooms.

Column Loudspeakers

Due to its simple and sleek design combined with its vertical mounting system, Ray-On can be fitted in buildings with the most demanding architectural constraints.

Available in multiple sizes, including a mini version for confined spaces.

Developed specifically for wide and even sound coverage and suitable for in or outdoors mounting Ray-On is suitable for public spaces, transport hubs and house of worship.

Open-Ceiling Loudspeakers

Providing excellent off-axis performance and easy installation (including direct conduit mount).

SoundTube's pendant speakers are available in multiple sizes and output.

Weatherised components make them suitable for mounting in and outdoors. They are ideal for open-ceiling installations including retail, supermarkets, restaurants and fitness centres.
