## Dante: The Audio Networking Standard for the Professional AV Industry

- > Up to 512 audio channels over one Ethernet cable
- > True IP-based networking for maximum flexibility
- > Chosen by over 40 of the top 50 pro audio manufacturers

### AUDIO TOOLBOX with Dante

With a range of digital interface cards AuviTran Audio Toolbox includes a Dante enabled interface card to communicate across multiple platforms including MADI, EtherSound, AES/EBU, ASIO and more.

Simply configure Audio Toolbox with the interface cards required for your networked audio system and you are ready to go. Audio Toolbox is available in four variants with 3 or 7 interface card options and stage-box or installation models.

The AuviTran range of products also includes the AV-WALL-DT4i interface and AVDT-BOB break-out interfaces. Find out more here...

### Multi-Channel Amplifiers with Dante

Ashly Audio nx Series amplifiers, available in two and four channel variants, offer added network flexibility with the Ashly OPDante card, allowing easy integration into Dante audio networks. Selectable speaker outputs per channel allow easy switching between 2,4 or 8 ohm loads or 70 or 100V constant voltage output.

With a number of models available with power outputs per channel ranging from 75W to 3,000W per channel, the nx series has your project covered.

The Ashly Audio range of Dante enable products also includes the new Ashly digiMIX18 and digiMIX24 digital mixers. Find out more here...

### In-Ceiling, Pendant and Surface Loudspeakers with Dante

SoundTube IPD Speaker Series brings the convenience of Dante control and management to in-ceiling, surface and pendant speakers allowing for end-point installations in Dante networked solutions.

Each Dante speaker is individually addressable, self monitoring and software set-up and configuration makes for easy zoning without needing to re-wire. Audio and up to 40Watts PoE can be run to each speaker via a single cable.

The SoundTube STNet-Switch or the Audinate Dante Controller can be used to route signal paths. Find out more here...
